

1.1- Insira em uma árvore rubro-negra, inicialmente vazia, as seguintes chaves, nesta ordem:  
**30, 42, 10, 35, 55, 50, 45.** Mostre a estrutura antes e depois de cada rotação que for necessária.

1.2- Repita as operações acima em uma árvore **rubro-negra left-leaning**, também inicialmente vazia.

2.1- Considere uma heap binomial, **sem** avaliação tardia, inicialmente vazia. Insira as chaves **7, 15, 12, 2, 6, 3, 4, 11, 5, 7 e 35** nesta ordem.

2.2- Da heap obtida, remova o elemento de prioridade mínima.

3- Construa uma árvore de Huffman para a seguinte frase: "~~sharks like shirts~~". Qual o tamanho desta frase se codificada utilizando sua árvore? (não esqueça do caracter espaço!)

4.1- Insira as seguintes chaves: **6, 41, 33, 17, 22 e 7** em uma tabela hash com encadeamento interno com área de colisão com espaço para 5 chaves. Utilize a função de hash  $h(x) = x \bmod 5$ .

4.2- Escreva o algoritmo de remoção de uma chave  $x$  nesta tabela hash. Lembre-se de atualizar a Lista de Espaço Disponível (LED).

5- Considere 10 conjuntos inicialmente unitários, com elementos 1, 2, 3, ... 10. Realize as seguintes operações, com compressão de caminhos e união por rank. Mostre o rank de cada elemento.

~~Une(1,2), une(1,3), une(4,5), une(6,7), une(8,9), une(6,9), une(2,6), une(3,4).~~  
**Lembre-se que as operações de união incluem operações find (com compressão de caminhos!).**
